Acoustic Pocket Doors

Sliding down the volume

Reduce the transmission of sound, quickly and simply with an acoustically rated sliding pocket door

Noise pollution is the unfortunate byproduct of the modern world in which we work, rest and play. In a world that never stops, the need for quiet, personal space has never been so important.

Within contemporary open-plan spaces, it's essential to have the ability to isolate sound when needed. Acoustic pocket doors are the perfect solution, allowing for the maximum amount of clear floor space whilst open, with the required reduction in sound when closed.

*Testing conducted under laboratory conditions to BS EN ISO 10140-2:2010. Site specific values may vary where other materials are interfaced.

UP TO 32dB ACOUSTIC ATTENUATION EXAMPLE
